

65. This medical condition causes:

- excessive thirst
- fatigue
- frequent urination

<sup>65</sup> D I A B E T E S

*You could have type 2 diabetes and not even know it. It often goes undiagnosed because many of its symptoms seem so harmless on their own. However diabetes is not a harmless condition and without treatment can lead to serious complications.*

Local physicians are studying an investigational medication compared to an already approved medication to treat type 2 diabetes.

If you are between 65 and 80 years old and have the symptoms of type 2 diabetes, or have already been diagnosed and not currently on diabetes medication, you may be eligible to take part.

If you qualify, you will receive all study-related care, including physical exams, lab services, and study medication.
